Route::post('/author', [App\Http\Controllers\AuthorController::class, 'store']);

Route::get('/book', [App\Http\Controllers\BookController::class, 'index']);
```

isi Controller

a. Author

```php
public function index()
{
    $authors = Author::all();

    return response()->json([
        "success" => true,
        "message" => "Get All Resources",
        "data" => $authors
    ], 200);
}
```

```php
public function store(Request $request)
{
    //Validasi
    $request->validate([
        'name' => 'required|string|max:255',
        'photo' => 'required|image|mimes:jpeg,png,jpg,gif,svg|max:2048',
        'bio' => 'required|string',
    ]);

    //Handle upload foto
    $photoPath = null;
    if ($request->hasFile('photo')) {
        //Simpan file ke storage/app/public/photos
        $photoPath = $request->file('photo')->store('photos', 'public');
    }

    //Simpan
    $authors = Author::create([
        'name' => $request->name,
        'photo' => $photoPath,
        'bio' => $request->bio
    ]);

    //Response
    return response()->json([
        "success" => true,
        "message" => "Data Berhasil Disimpan",
        "data" => $authors
    ], 201);
}
```

b. Genre

```php
public function index()
{
    $genres = Genre::all();

    return response()->json([
        "success" => true,
        "message" => "Get All Resources",
        "data" => $genres
    ], 200);
}
```

```php
public function store(Request $request)
{
    //Validasi
    $request->validate([
        'name' => 'required|string|max:255',
        'description' => 'required|string',
    ]);

    //Simpan
    Genre::create([
        'name' => $request->name,
        'description' => $request->description
    ]);

    //Response
    return response()->json([
        "success" => true,
        "message" => "Data Berhasil Disimpan",
    ], 201);
}
```
